## Consumer Confidence Report Certification Form

(to be submitted with a copy of the CCR)

(to certify electronic delivery of the CCR, use the certification form on the State Board's website at <a href="http://www.waterboards.ca.gov/drinking\_water/certlic/drinkingwater/CCR.shtml">http://www.waterboards.ca.gov/drinking\_water/certlic/drinkingwater/CCR.shtml</a>)

Wa	ter Syst	TOYON PARK WATER SYSTEM LLC
Wat	er Syst	rem Number: # 05-00039
Furt	her, the	system named above hereby certifies that its Consumer Confidence Report was distributed on (date) to customers (and appropriate notices of availability have been given). e system certifies that the information contained in the report is correct and consistent with the monitoring data previously submitted to the State Water Resources Control Board, Division & Water.
Cert	ified b	y: Name: Cherryl Churchill-Stanland
		Signature: Elerryl Thurshill Stantaid
		Title: Co-Owner / Marrager
		Signature: Cherryl Churchill-Standard  Signature: Co-Owner Manager  Phone Number: (209) 745-4535 Date: 6/22/16
all ii	CCR	rize report delivery used and good-faith efforts taken, please complete the below by checking at apply and fill-in where appropriate:  was distributed by mail or other direct delivery methods. Specify other direct delivery ods used:
X	"Goo follo	d faith" efforts were used to reach non-bill paying consumers. Those efforts included the wing methods:
		Posting the CCR on the Internet at www
	$\boxtimes$	Mailing the CCR to postal patrons within the service area (attach zip codes used) 95945
		Advertising the availability of the CCR in news media (attach copy of press release)
		Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
		Posted the CCR in public places (attach a list of locations)
		Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools
		Delivery to community organizations (attach a list of organizations)
		Other (attach a list of other methods used)
	For sy	vstems serving at least 100,000 persons: Posted CCR on a publicly-accessible internet site at llowing address: www
		rivately-owned utilities: Delivered the CCR to the California Public Utilities Commission
		This form is provided as a convenience and may be used to meet the certification requirement of

section 64483(c), California Code of Regulations.

# 2015 Consumer Confidence Report Toyon Park Water System LLC

PO Box 608, Valley Springs, CA
WATER SYSTEM NUMBER CA 0500039

We're pleased to present to you this year's annual Consumer Confidence Report (CCR). This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We are committed to ensuring the quality of your water. Our water source consists of 2 wells located on the property.

If you have any questions about this report or concerning your water utility, please contact Richard Nurse at (209) 256-1416 and/or Ryan Churchill at (209) 418-8385.

Espanol – (Spanish): Este informe contiene información muy importante sobre su agua beber. Tradúzcalo ó hable con alguien que lo entienda bien.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (USEPA) and the State Department of Health (Department) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline at 1-800-426-4791.

Contaminants that may be present in source water include:

- Microbiological contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturallyoccurring or be a result of oil and gas production and mining activities.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

### WATER QUALITY DATA

Toyon Park Water System routinely monitors for constituents in your drinking water according to Federal and State laws. Tables 1, 2, 3, 4, 5 and 6 list all of the drinking water contaminants that were detected above the DLR during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The table does not include contaminants that were not detected by laboratory testing. Unless otherwise indicated, the data contained in this report are for the monitoring period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2015. The Department allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the results in this report, though representative, may be more than a year old.

#### TERMS USED IN THIS REPORT:

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

**Primary Drinking Water Standards (PDWS):** MCLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS):
MCLs for contaminants that affect taste, odor, or
appearance of the drinking water. Contaminants with
SDWSs do not affect the health at the MCL levels.
ND: not detectable at testing limit

**ppm**: parts per million or milligrams per liter (mg/L) **ppb**: parts per billion or micrograms per liter (ug/L) **pCi/L**: picocuries per liter (a measure of radiation)

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Variances and Exemptions: Department permission to exceed an MCL or not comply with a treatment technique under certain conditions.

**DLR**: Detection Limit for purposes of Reporting. The DLR is set by state regulation for each reportable analyte.

Table 1 – Sampling Results Showing The Detection Of Coliform Bacteria								
Microbiological Contaminants	Highest No. of detections	No. of months in violation	MCL	MCLG	Typical source of Bacteria			
Total Coliform Bacteria	(In a mo.) None	None	More than 1 sample in a month with a detection	0	Naturally present in the environment			
Fecal coliform or E. coli	(In the yr) None	None	A routine sample and a repeat sample detect total coliform and either sample also detects fecal coliform of <i>E.coli</i>	0	Human and animal fecal waste			

Water systems are required to meet a strict standard for coliform bacteria. Coliform bacteria are usually harmless, but their presence in water can be an indication of disease-causing bacteria. When coliform bacteria are found, special follow-up tests are done to determine if harmful bacteria are present in the water supply. If the standard is exceeded, the water supplier must notify the public. Toyon Park Water System is pleased to inform you, no coliform bacteria were detected during the monthly distribution samples in 2015.

❖ Table 2 – Sampling Results Showing The Detection Of Lead And Copper								
Contaminant (CCR units)	MCL	PHG	Average	Range	Sample Date	Violation	Typical Source	
Lead (ppb)	AL = 15	0.2	5	5 sites sampled; 0 sites over action level	2015	No	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits	
Copper (ppm)	AL = 13	0.3	5	5 sites sampled; 0 sites over action level	2015	No	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives.	

Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time may experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years may suffer liver or kidney damage. People with Wilson's Disease should consult their personal doctor.

Lead - If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Toyon Park Water System is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <a href="http://www.epa.gov/safewater/lead">http://www.epa.gov/safewater/lead</a>.

•	Table 3 –	Sampling	Results Fo	r Sodium	and Har	dness
Chemical or Constituent (reporting units)	Sample Date	Average Level Detected	Range of Detections	PHG (MCLG)	MCL	Typical Source of Contamination
Sodium (ppm)	05/05/05	10.3	NA	none	none	Generally found in ground and surface water
Hardness (ppm)	05/05/05	111	NA	none	none	Generally found in ground and surface water

Iron MCL violation - "Iron was found at a level that will exceed the secondary MCL. This MCL was set to protect you against unpleasant aesthetic effects such as color, taste, odor and the staining of plumbing fixtures (e.g., tubs and sinks), and clothing while washing. The high iron level is due to leaching of natural deposits."

MCL's are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-amillion chance of having the described health effect.

Report prepared 5/25/2016 by Alpha Analytical Laboratories, Inc., using *CCR Guidance for Water Suppliers* available at, http://www.waterboards.ca.gov/drinking\_water/certlic/drinkingwater/CCR.shtml, employing due diligence with instructions given. Data contained in this report are based on the analytical results generated by Alpha Analytical Laboratories and its subcontract laboratories.

<sup>(</sup>a) There are no PHGs, MCLGs, or mandatory standard health affects language for constituents with secondary drinking water standards because secondary MCLs are set on the basis of aesthetics.
